## Euro Cordless DC 209

The compact, stylish phone system for the ultimate cordless office.

The Aristel Euro Cordless offers the smaller office or home much more than a cordless two-line phone system that requires no installation. Euro adds a stunning array of features usually only found in high-price phone systems for the ideal combination of performance, value and ease of use.

Aristel Euro Cordless supports two lines; either stand-alone or an extension of an existing office system. On the outside, Euro reflects the sleek German design of the ultra-compact base unit and large-display handsets. On the inside, Aristel technology enables features such as least call routing, caller ID to the handset, loud-speakerphone function, conference calling, hotkey dialing, hold and transfer call facility and much more.

A major feature of Aristel Euro Cordless is flexibility. The system comes with a two-line base unit and two handsets, yet has capacity for up to 15 handsets. One or two more base units can be added for a total capacity of up to six lines and 45 handsets. For even more flexibility cordless handsets can be combined with the smart C-710 Cordless Desk Phone. There's even the facility for modem, fax or answering machine connection.

The Aristel Euro Cordless is fully backed by the Aristel manufacturing and worldwide distribution network with a one year, all-component warranty.
